

ARROW REEL-UPS

You can now transfer your 50 ft. 8 mm. spool as it comes back from processing, into a 200 ft. spool immediately. This can be done by using the Arrow Reel-ups which fit all current Regular 8 and Super 8 spools. The packet contains three solid and three cut-out spool slides in grey plastic and two capsules of special cement. This cement is applied to the inside rims of the Reel-ups which are shaped to fit the outer rim of the 50 ft. processing spools. A packet costs 4s. 11d. and when you consider that there are three inside and then you compare it with the normal cost of the cine reel, this is a bargain. Dust covers are available to fit over the open-ended side of the Reel-ups so that a completely closed unit is effected. These are available at 2s. 6d. each. The Arrow Reel-ups are distributed by Arrowtabs Limited, Granville Mews, Cricklewood Lane, London, N.W.2.
