

MEET THE ILFORD CHEMICAL FAMILY

Ever wonder why Ilford Limited offer you so many developers and fixers? There's a very good reason – each is designed for a specific application.

Just to help you select those Ilford chemicals which are right for you, here's a potted guide to the ones you're most likely to use.

FILM DEVELOPERS

HYFIN

The high acutance developer for critical sharpness and extra film speed. For use with fine grain films such as Pan F, FP3 and FP4.

MICROPHEN

Gives you extra film speed without extra grain. Suitable for all films, but you'll really find it comes into its own with fast films such as HP3 and HP4.

ID-11

The established standard fine-grain formula.

FIXERS

HYPAM

For rapid fixing – does the job in one minute.

ILFOFIX

The budget-priced hardening fixer – slower than Hypam.

PRINT DEVELOPERS

BROMOPHEN

When you want a print developer supplied in powder form.

PQ UNIVERSAL

When you want the convenience of a concentrated liquid print developer.

PRINT FIXER

ILFOFIX

The recommended fixer for Ilfobrom, Multigrade and Plastika papers.
