

Alford Exposure Meter.

WE have just introduced a new form of this instrument, and it will be found a great improvement over the old form in every way. It is lighter and smaller; the figures are more easily read, and the several scales are shown up more distinctly by being lettered in red and black alternately; we have had small setting pins added to each of the circles to facilitate their rotation; finally the instrument is now made in aluminium, so that it will not warp or tarnish. It can be obtained from all photographic dealers.
